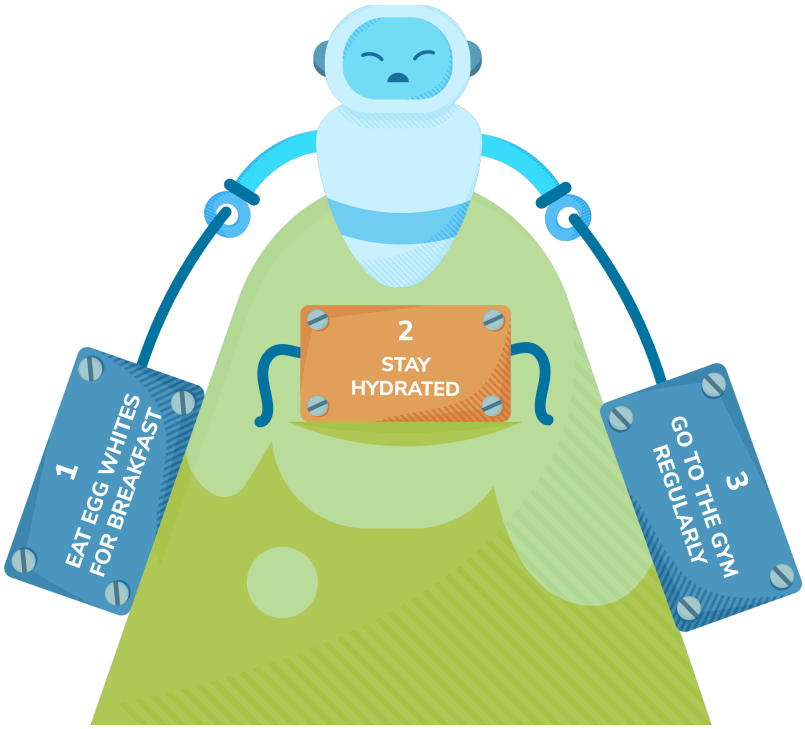
Inserting Text

Explore how to insert text in between prefix and suffix prompts using the OpenAI completions endpoint. Learn to generate coherent and contextually relevant content for use cases like marketing email creation and automated report writing. Understand parameters like prompt, suffix, and max tokens to optimize the insertion process.

Overview

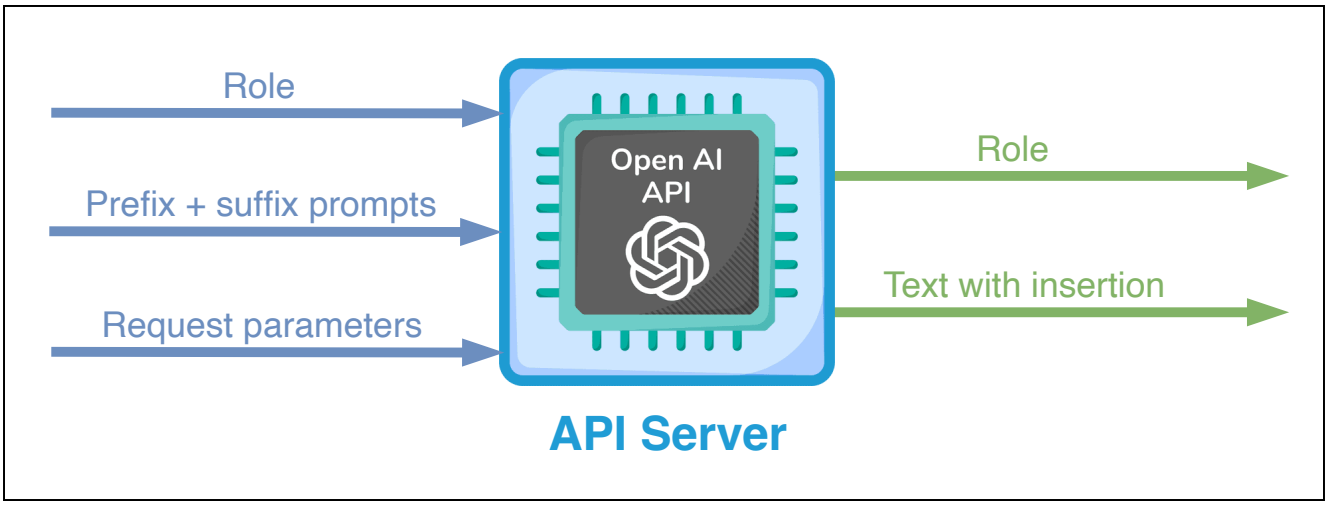
OpenAI's GPT-3.5 model has the ability to insert additional text between two separate texts. For this purpose, we provide a prefix prompt (`prompt`) as an incomplete text and suffix prompt (`suffix`) as the ending text. The long prefix prompt helps the model to understand the context. A sentence can be interpreted differently, but the suffix helps the model to understand the sentence's ending context.

Ask



Inserting text

We input the prompt text and request parameters into the OpenAI API's model to insert the text.



Completions: inserting text

Examples

Ask

We've added the `prompt` (prefix) and `suffix` texts about Educative below. Let's see what the OpenAI model inserts between them:

Please provide values for the following:

SECRET_KEY Not Specified...

Edit Import Values from JSON

main.py Python

```python
from openai import OpenAI
import textwrap

client = OpenAI(api_key="{{SECRET_KEY}}")

response = client.chat.completions.create(
    model="gpt-3.5-turbo",
    messages=[
        {"role": "system",
         "content": " You are provided a prefix prompt (prompt) as an inc
        {"role": "user",
         "content": "prefix prompt: Educative is a leading online learnin
    ]
```

Run

Completions: Inserting text

Let's see the body parameters that are different in the insert text endpoint:

- **Line 12:** The `prompt` is the prefix of the sentence, which is to be completed by the model. The `suffix` is the ending of the sentence, which is to be completed by the model.

Now, let's ask the model for some help with the weight loss process. We'll provide the model with the first and last steps of the process and let it fill in the rest:

Ask

Please provide values for the following:

SECRET_KEY Not Specified...

Edit Import Values from JSON

main.py Python

```
from openai import OpenAI
import textwrap

client = OpenAI(api_key="{{SECRET_KEY}}")

prompt_prefix = "How to lose weight:\n1. Do not skip breakfast."
prompt_suffix = "12. Plan your meals"

response = client.chat.completions.create(
  model="gpt-3.5-turbo",
  messages=[
    {"role": "system", "content": prompt_prefix},
    {"role": "user", "content": "Print the methods to lose weight"}
```

Run

Completions: Inserting text

It is suggested to use `max_token` with a value greater than 256 because the model works well for longer completions. Try the above examples with different values of `temperature` and examine the results.

Practical use case

Some practical use cases of OpenAI's text insertion capabilities include:

- **Content generation for marketing campaigns**: A marketing team must create engaging email campaigns targeting different customer segments. They want personalized messages that resonate with each audience. The team can use GPT-3.5 to generate email content. They can provide a long prefix prompt outlining the campaign theme, audience demographics key messaging. The suffix prompt specifies the desired call-to-action or

closing statement. GPT-3.5 fills in the missing text, crafting compelling and tailored email content for each segment.

- **Automated report writing:** A business intelligence platform assists analysts
